Drug Addiction

NROD66H3

(Friday 10:00-12:00 pm; AA 204)

Instructor: Suzanne Erb

Office: Temporary location (Sept 2010 until further notice), SW-414B;
        Permanent location, SW-531

Office hours: Monday 2:30-4:30 pm

E-mail: erb@utsc.utoronto.ca

COURSE DESCRIPTION

This course is designed to provide an overview of current topics in the field of drug addiction research, with a specific focus on the major phases of the addiction cycle, including drug use (intoxication), withdrawal, and relapse. Consideration will be given to what basic motivational and corresponding neurobiological processes influence behavior during the various phases of the addiction cycle, by examining the empirical findings within the context of some of the major theoretical models guiding the field. A series of seminars, led by students, will highlight recent and exciting advances in the field, and will emphasize complimentary work carried out in human subjects and laboratory animals. In addition to leading a seminar, students will develop a research proposal based on their seminar topic. These two assignments are intended to provide students with the opportunity to engage in an in-depth exploration and critical analysis of a relevant topic in the field of addiction research, and to consider the implications of the literature for future research.

*Role of stress in drug craving and relapse: Human studies*

**Assigned Readings**

**Week 10**

Nov 19  **Stimulant sensitization and relationship to reinstatement: Animal studies**

Assigned Readings

**Week 11**

Nov 26  **Rate of drug administration and susceptibility to sensitization: Animal studies**

Assigned Readings

DESCRIPTION OF COURSE COMPONENTS

SEMINAR 30% of final grade

Scheduling

Each student will participate in leading a seminar on one of the 6 topics scheduled between Weeks 6 and 11 (Oct 22-Nov 26) of the course. Depending on course enrollment, between 2 and 4 students will participate in each of the seminars. During class on Week 3 (Oct 1), students will be asked to submit a first, second, and third choice for which seminar they wish to participate in. Students wishing to be assigned to the same seminar group should submit one request under both/all names. By Week 4 (Oct 8), seminar assignments will be posted on the intranet.

Content

Each group assigned to a particular seminar topic will be responsible for providing a presentation based on the assigned readings (listed above), and leading a class discussion. Each group will have the full class time for their presentation (including discussion time). As a group, students may chose to give a series of relatively independent presentations (i.e., they may divide the time equally between/among members), or they may chose to prepare a more integrated presentation. Either way, the seminar should be organized as a group, with an emphasis on the themes/concepts/questions that relate the individual papers. That is, the seminar as a whole should reflect a cohesive conceptual framework. In addition, an effort must be made to relate the material back to the main theme of the course, “The cycle of addiction”. That is, an effort must be made to identify how the material is relevant to informing our understanding of the various phases of the addiction cycle (drug use, withdrawal, and relapse).

THOUGHT PAPERS 20% of final grade

(10% per paper)

For 2 of the 6 seminar topics, students will be required to write a “thought” paper of no more than 500 words (or 2 type-written, double-spaced pages), describing one central idea, theme, problem, or question that relates the articles assigned for that topic. Students may select any 2 topics to write on, except that:

1. Students may not select the topic they are presenting on.

2. At least one of the two papers must be selected from the first 3 topics.

Thought papers are due at the start of the class corresponding to that seminar topic. Late papers or electronic submissions will not be accepted.
CLASS PARTICIPATION 10% of final grade

Students will be graded for attendance and participation in class discussion. A major factor in this component of the evaluation will be the quality of participation; students’ contributions should reflect a good level of familiarity with and comprehension of assigned readings.

RESEARCH PROPOSAL 40% of final grade

Students will write a research proposal, based on a question that clearly emerges from their seminar topic. More information about the research proposal will be provided in class on Oct 8. In addition, a library workshop will be held on Oct 15 to provide students with an overview of the most useful search engines/data bases in Neuroscience and strategies/tips for conducting effective literature searches.

Evaluation of the research proposal will be based on the originality and quality of the research question/s, identification and synthesis of the relevant literature (including scope and currency of the literature review), appropriateness and feasibility of the proposed experiment/s (including experimental design), and general stylistic and formatting considerations. Students are strongly encouraged to meet with Professor Erb during office hours (or by appointment) to obtain guidance in the development of proposals.

Final proposals should follow the stylistic guidelines for the Journal of Neuroscience (more information on this will be provided in class Oct 8) and include the following section headings and corresponding content:

----------------------------------
Title page
Abstract (maximum 250 words or 1 double-spaced page)
The abstract should provide a brief overview of your proposal, including brief statements of background/rationale, objectives and hypotheses, methods, and predicted results.

Introduction (maximum 1000 words or 4 double-spaced pages)
This section should provide a brief review and synthesis of the relevant literature, with the key objective of developing the rationale for the proposed experiment/s. The section should conclude with clear statements about your research objectives and hypotheses. In addition to the articles assigned to your seminar topic, a minimum of 10 additional articles from the primary literature must be included in your literature review; the majority of these articles (at least 6) must have been published in the last 5 years.

Methods (maximum 750 words or 3 double-spaced pages)
This section should be written in the future tense and include relevant subsections (e.g., subjects, drugs, apparatus, procedures, etc). It should include a very clear description of your research
design, including the nature and number of experimental groups and how many subjects will be
included in each group.

Results (maximum 500 words or 2 double-spaced page)

Your results section should provide a succinct description of what you anticipate your
experimental findings to be (you are not required to discuss methods of statistical analysis,
although you may chose to do so). Do not include graphs with hypothetical data; rather, describe
in words the specific differences in the direction of the dependent measure(s) that you expect to
observe between experimental groups.

References (no restrictions but must be formatted according to the Journal of Neuroscience)

Papers are due Mon December 6 (last day of classes, UTSC), 4:30 pm, in Professor Erb’s
office. Late or electronic submissions will not be accepted.

TIMEFRAME FOR EVALUATION AND FEEDBACK

Grades and feedback for oral presentations will not be given until the last class meeting, after all
students have presented. Grades and feedback for thought papers will be given in class, one
week after they are submitted. In order to receive 20% of the final course evaluation before the
last day to drop a course in the fall term (Oct 21), students will need to select from the first 4
topics for their thought papers.
