Neuropsychological Rehabilitation (PSYC33H3 S)
University of Toronto Scarborough
Winter 2015

Course Directors: Dr. Eva Svoboda
Dr. Sharon Jankey
Office Hours: By appointment (1 hour)
Email: esvoboda@baycrest.org (416 785-2500x2764) before or after class; or by phone
sjankey@westpark.org (cell: 416-823-7651)

Teaching Assistant: Ryan Howes
E-mail: ryan.howes@mail.utoronto.ca
Office Hours: By appointment (in person or online)

Course Websites: https://portal.utoronto.ca

Class Time and Location: Thursdays 9:00 am – 11:00 am; AA 206

Objective: Interventions in the field of Neuropsychological Rehabilitation are discussed against a backdrop of evidence-based practice, relevant neuropsychological and psychological theory and research. The course examines interventions across a number of cognitive domains including memory (healthy aging, mild cognitive impairment, dementia and amnesia), language, executive function, behavioural and emotional disorders. Other relevant topics in neuropsychological rehabilitation are also covered including neuroplasticity, behaviour management, psychotherapeutic interventions, adjustment to disability from the patient and family perspectives, roles within the multidisciplinary team and program evaluation.

Evaluation:

<tbody>
<tr>
<td>Midterm exam</td>
<td>February 26</td>
<td>Lectures + required readings</td>
<td>30%</td>
</tr>
<tr>
<td>Research paper</td>
<td>April 2</td>
<td>20 page (max) paper detailing the design and evaluation of an intervention for a neuropsychological deficit. This can be a case or group study from topics covered in class.</td>
<td>30%</td>
</tr>
<tr>
<td>Final exam</td>
<td>TBD</td>
<td>ALL lectures and readings</td>
<td>40%</td>
</tr>
</tbody>
</table>

Exam Format: Midterm and final examinations will include multiple choice and short answer questions. Information from lectures and readings will be tested equally on both midterm and final exams. The final exam is cumulative on ALL material covered in the course. However more emphasis will be placed on material covered since the midterm.

Missed Exam Policy: Students who miss the midterm exam will have their grade prorated over the research paper and final exam. The prorating option will NOT be granted unless the instructor(s) receives appropriate documentation, such as a signed medical certificate or college registrar’s note within one week of the missed exam. There will be no make-up exam for missed midterms.

**March 26**

Research Papers

Objectives
Writing a research paper will help you achieve three important objectives: (1) To expand your knowledge of neuropsychological and behaviour change interventions by focusing on an area that is of particular interest to you; (2) To further develop your skills as a critical reader of psychological research; and (3) To develop your scientific writing skills.

Research Paper: Design a neuropsychological/behaviour change intervention

General Requirements
In the research paper you should review critically an area of neuropsychological rehabilitation with respect to interventions designed to treat a neuropsychological/cognitive deficit covered in the course. Choose from the general topics of memory, behaviour, executive function, motor, etc. and decide on a deficit within one of these domains to address with a neuropsychological intervention. You will design an intervention to ameliorate the neuropsychological deficit of interest or associated psychological challenge (anxiety, depression, adjustment difficulties, lack of insight), evaluate the efficacy of your intervention (in which you will generate mock data) and critically discuss your findings in the context of the current literature in the field. A list of research topics chosen by prior students is provided.

Specific Requirements
• The research paper should be a maximum of 20 double-spaced pages in length (not including references, tables or figures generated)
• Use 12 point font, Times New Roman.
• You must have a minimum of 10 primary sources (journal articles) in your reference section. The references should be mainly from the 1990s and 2000s.

Required Sections of the Research Paper
The research paper should be written as if it were a peer-reviewed journal article, in proper APA format.

Abstract. One paragraph, approximately 120 words in length, that briefly describes the area of investigation, type of participant(s), the presenting problem, the nature of the intervention and lastly the results and the significance of those results. Put the abstract on a separate page immediately following the title page.

Introduction. This section should describe the research area and findings from previous studies. The literature review should also discuss an issue or question that needs to be addressed in that area and provide a clear rationale for the proposed study. It should also include generally the theory behind the rehabilitative approach that is used in the study.

Methods: This section should include a description of the participant(s) and their presenting problem, a description of any equipment and how it was used, as well as a description of how the intervention was applied and specific description of the independent and dependent variables measured.

Results (mock data you generate). This section should describe your findings. You will generate mock data based upon what you might reasonably expect to have happened. Provide a table or a graph to represent the data along with a verbal explanation of the results.
Discussion. Discuss and review your findings in the context of what is currently known in the field. Include an explanation of how well the results fit the specific hypotheses, limitations of the study, and other theoretical issues. Try to highlight the significance / contribution of your research to the field and suggest future investigations.

References. You must have at least 10 primary sources (journal articles). The references should be mainly from the 1990s and 2000s.

Use APA Format
You should use the guidelines for scientific writing that have been developed by the American Psychological Association (APA). It is recommended that you consult the Publication Manual, 6th edition of the APA to determine the appropriate methods for citing research in your research paper and for creating your list of references.
